

You know that the 2-digit numbers, except for the multiples of ten, are read from right to left. How about the higher numbers from 100 onwards?

100 = hundert (or einhundert)

101 = hunderteins (or einhunderteins)

316 = dreihundertsechzehn

847 = achthundertsiebenundvierzig

3200 = dreitausendzweihundert

9531 = neuntausendfünfhunderteinunddreißig
